Confiscated from hoarding situat:						
Subjective						
Reason for Visit: Exam						
Exam						
Confiscated from hoarding situation today. Originally from "Rescue of the Forgottens", a rescue out of New York. Appears to be lab mix, possibly SharPei?						
Objective						
Vitals: 12:51pm 10/18/16 Wt: 53.4 lb. T: 100.2 F. HR: 100 RR: 24/0 CRT: <2 Other: mm pink By: DCB						
General Appearance: BAR, nice but seemingly dog aggressive						
Eyes: WNL						
Ears: WNL						
Integument: patchy alopecia, very dry coat. 2cm diameter superficial abrasion caudal to right elbow.						
Oral Cavity: mm pink, great teeth						
Lymphatics: WNL						
Cardiovascular: no murmur, PSS						
Musculoskeletal: somewhat thin						
Gastrointestinal: WNL						
Urogenital: marked mammary development, nursing litter of 8 pups						
Respiratory: WNL						
Neurologic: WNL						
Assessment						
minor skin abrasions, poor hair coat (r/o mange versus poor care?) nursing female						
Plan						
overall healthy, OK to go to shelter, but recommend skin scrape, fecal.

Oct 19, 2016	Jay Vollnski, DVM	Diarrhea		
			ACO's came in today to submit:	
	Note			
		<i>Reason for Visit:</i> Diarrhea		
		Diarrhea		
			ACO's came in today to submit fecal samples for Ally (mother) - Ally and each of the puppies has fetid diarrhea, and Jana is concerned she might have seen tapeworms in the feces of some of the puppies. Sending out Fecal O&P + Giardia on Ally's sample. Starting all 9 of them (Ally included) on Panacur 50mg/kg PO SID x5d (12mL for Ally, 0.7mL for each of the puppies SID). Dispensed 200mL of 100mg/mL Panacur to Jana for all of them. Can get refills here later if needed. Should repeat in 2 weeks.	
Oct 19, 2016	Jay Vollnski, DVM	PanacurSusp	Fenbendazole (Panacur) Suspension 100mg/ml Rx Num: 43382 Refills: 0.00 Expires: 12/31/2017 Give orally once a day for 5 days. Ally: 12mL orally; Puppies: 0.7mL orally Repeat in 2 weeks.	200 ml
Oct 19, 2016	Jay Vollnski, DVM	Ideox2463	Idexx Fecal Ova and Parasites with Giardia	1 ea
Oct 20, 2016	Jay Vollnski, DVM		Idexx fecal/Giardia results: - O&P	
	Note			
		<i>Reason for Visit:</i> Medications		
			Idexx fecal/Giardia results: - O&P: Giardia cysts present many (>30) - Giardia ELISA: positive	
			Extending Panacur doses for Ally (mom) and all pups to 5 days (repeat in 2 weeks). ACO (Jana) came in to pick up additional supply of Panacur.	
Oct 27, 2016	Jay Vollnski, DVM	skin irritation		
			Hudson ACO (Jana) call:	
	Subjective			
		<i>Reason for Visit:</i> skin irritation		
		skin irritation		
			Hudson ACO (Jana) called today to report that Ally has a pruritic rash and that she is losing fur in random patches (see photos). The puppies seem to be unaffected. No other dogs in the shelter have anything similar.	
	Plan:			
		From photos that were sent, the pattern does look haphazard and the skin is not erythemic, so it does not look like Sarcoptes or Demodex. Other options are superficial pyoderma and ringworm, but it sounds like this is more pruritic than I would expect for ringworm, and dogs rarely get it quite so widespread.		
			Discussed dispensing Amoxicillin for pyoderma - if that does not help, then we will need to examine her and perform skin scrapings +/- fungal cultures to determine what else might be going on. Jana is game for this, got it approved through police dept.	
			Dispensed Amoxicillin 500mg capsules #14, Give 1 cap PO BID x7d to Ally.	
			She will be by to pick up the Rx within the hour.	

Patient:	Ally #1	Rottweiler Mix	Client:	ACO Pelham	
Oct 27, 2016	Jay Vollnski, DVM	Amox500Caps Rx Num: 43474 Refills: 0.00 Give 1 capsule by mouth every 12 hours until gone.	14	cap	
Nov 02, 2016	Jay Vollnski, DVM	Update  (12:57PM 11/2/16 Jay Vollnski:  Note  Reason for Visit: Update Update  (12:57PM 11/2/16 Jay Vollnski, DVM) TT Jana (Hudson ACO) on phone. Ally's fur loss and pruritus has not improved on the Amoxicillin. See new photos - patchy alopecia is spreading, Jana reports that Ally continues to lose fur and that her body feels generally warm and smells a bit yeasty. None of the puppies are symptomatic at all. They had come to the conclusion it might be food allergies - I have to concur that that seems likely. Cannot completely r/o demodex, but food allergies seem to fit best. They have already switched her diet from one with beef & pork ingredients to one with just chicken. They think that her symptoms are mildly improved since the switch. Discussed putting her on a short tapering course of Prednisone. I would probably also treat her with Revolution just to be safe. Both are safe for the puppies. Unfortunately we do not sell Revolution here - she thinks she may be able to get a dose or two from Hudson AH - told her that if they need a prescription we can send one over to them. Jana will come to pick up Pred shortly.	6	tab	
		Prednisone 20mg #12: 1/2 tab (10mg) PO BID x3d, then 1/2 tab (10mg) PO SID x3d, then 1/2 tab (10mg) PO EOD until gone			
		 (1:26PM 11/2/16 Muscatell, Christine) ACO came in to pick up pred, paid for Rx only. Puppies are doing great! they are still passing roundworms and on their second series of deworming. They saw/stood on grass for the first time. Dr posage is involved in the training of the mom/puppies.			
Nov 02, 2016	Jay Vollnski, DVM	Prednisone20 Rx Num: 43544 Refills: 0.00 Expires: 4/30/2017 Give 1/2 tablet by mouth every 12 hours for 3 days, then 1/2 tablet once daily for 3 days, then 1/2 tablet every other day until gone.	6	tab	
Nov 09, 2016	Jay Vollnski, DVM	Update:  Jana was here with "red male":  Note  Reason for Visit: Vomiting Update:  Jana was here with "red male" puppy today (for vomiting). While here, she updated us that Ally has been weaned down to EOD Prednisone at this point and she is becoming itchy again. None of the puppies is symptomatic for the pruritus or alopecia, even now. No evidence of fleas on Ally or any of the puppies. Most likely explanation would seem to be that Ally is allergic to something, although they haven't really tried a novel-ingredient diet yet. Currently she is eating a diet that contains a combination of chicken and duck as protein. Jana tried to find Revolution, but the places she checked did not carry it - may be able to get some from a shelter yet they work with. That would be just to cover the possibility of demodex. Scabies would almost certainly have spread to the puppies by this point, as would have ringworm. Jana is going to follow up with shelter vet r/e Ally.	1	tab

Dec 02, 2016	Judith Leclerc, DVM	Skin scraping	Presented from Pelham for:	
<p><b>Subjective</b></p> <p><i>Reason for Visit:</i> skin scrape  <b>Skin scraping</b>          Presented from Pelham for skin scraping, has been on revolution, Unknown vax history. Unknown if fecal has been done. Hoping to send her to ARL. ACO asked about a health certificate. Unable to give without vax history, fecal, etc. Has seen drops of blood in urine. Had pups 9 weeks ago and all weaned. Not on any meds now but was on pred.</p>				
<p><b>Objective</b></p> <p>BAR</p> <p><b>Vitals:</b> 11:10am 12/2/16 <b>Wt:</b> 63 lb. <b>T:</b> 101.6 F. <b>HR:</b> 120 <b>By:</b> DJL</p> <p><b>General Appearance:</b> Bright, alert and responsive; good body condition  <b>Eyes:</b> Corneas clear, pupils normal size, symmetrical; sclera white, no ocular discharge  <b>Ears:</b> No exudate observed; no redness present  <b>Integument:</b> Gen alopecia, scabs, crusts, excoriations.  <b>Oral Cavity:</b> Teeth are free from excessive tartar; gums are pink and moist; no gingivitis present  <b>Lymphatics:</b> Lymph nodes all normal size  <b>Cardiovascular:</b> Regular rhythm; no murmur detected; strong femoral pulses; CRT &lt; 2 sec  <b>Musculoskeletal:</b> Ambulates normally  <b>Gastrointestinal:</b> Normal eliminations; palpates normally  <b>Urogenital:</b> Enlarged/flaccid mammary glands. No discharge from vulva today.  <b>Respiratory:</b> Lungs auscultate clear; trachea clear  <b>Neurologic:</b> No apparent abnormalities</p>				
<p><b>Assessment</b></p> <p>Gen dermatitis, r/o demodex vs sarcopties, allergy, intestinal parasite such as hookworms, heartworms, malassezia dermatitis</p>				
<p><b>Plan</b></p> <p>skin scraping three sites. One demodex noted. No sarcops seen.          REC treat for demodex with ivermectin, cefpodoxime          Do fecal, HW check, regular bathing with malaseb.          Ready to spay anytime.</p>				
<p><b>Discharge</b></p> <p>Ally presented for chronic skin issues. A skin scraping was done and was negative for sarcoptic mange. 1 Demodex mite was seen. Demodex is normal in low numbers and very difficult to find. I suspect that she has demodex and should be treated for several months until resolution. A heartworm check and checking for Intestinal parasites should be done as well. Ensure she is eating a good quality diet. Regular bathing with an anti yeast, follicular flushing shampoo is also recommended. Antibiotics will help with the infection in her skin as well as treat a possible urinary tract infection and possible infected uterus. Please call if you have any questions or problems.</p>

Nov 09, 2016	Jay Volinski, DVM	Vomiting ("red male" puppy)					
<small>Jana (Hud):</small>							
<p><b>Subjective</b></p> <p><b>Reason for Visit:</b> Vomiting Vomiting ("red male" puppy)</p> <p>Jana (Hudson ACO) brought in one of Ally's puppies ("red male") today for an acute onset of vomiting. The puppies are about 5-6 weeks old at this point. Jana reports that they all still have soft stool or diarrhea - this never changed, even after the 5-day course of Panacur they were on a couple of weeks ago (Ally herself was positive for Giardia; she was treated with Panacur and no longer has diarrhea). All of the puppies are starting to be weaned onto solid food, although they all still nurse also. Jana is having a hard time dealing with the litter and keeping them clean - tried moving the litter to a different crate/enclosure last night to give Ally more room, but when she looked in on them today it was a disaster - all puppies were covered in feces and had spread it on all surfaces of the enclosure. She grabbed the first thing available to clean them off, using H2O2 and towels - reports that normally she dilutes the H2O2 but this time she forgot. Got all of the puppies cleaned up and released them back into the room with Ally. Since that time the puppies have seemed less interested in food than they had been initially. "Red male" puppy has vomited several times (curdled milk and fluid), and was looking a little shaky - so we recommended bringing him down to be evaluated.</p>							
<p><b>Objective</b></p> <p>Vitals: 4:00pm 11/9/16 Wt: 8 lb. T: 101.2 F. HR: 140 RR: 30/0 CRT: pk, &lt;2 By: DJV</p> <p><b>General Appearance:</b> QAR</p> <p><b>Eyes:</b> Corneas clear, pupils normal size, symmetrical; sclera white, no ocular discharge</p> <p><b>Ears:</b> No exudate observed; no redness present</p> <p><b>Integument:</b> Normal amount of shedding; skin looks normal; hair coat in good condition</p> <p><b>Oral Cavity:</b> Teeth are free from excessive tartar; gums are pink and moist; no gingivitis present</p> <p><b>Lymphatics:</b> Lymph nodes all normal size</p> <p><b>Cardiovascular:</b> Regular rhythm; no murmur detected; strong femoral pulses; CRT &lt; 2 sec</p> <p><b>Musculoskeletal:</b> Ambulates normally</p> <p><b>Gastrointestinal:</b> Abd soft, palpates normally</p> <p><b>Urogenital:</b> normal eliminations; external genitalia appears normal; bladder palpates normally</p> <p><b>Respiratory:</b> Lungs auscultate clear; trachea clear</p> <p><b>Neurologic:</b> No apparent abnormalities, no shaking or tremoring</p>							

Patient: Litter of Puppies

Client: ACO Pelham

**Assessment****DIAGNOSTICS:**

- BG (glucometer): 190 mg/dL (r/o stress hyperglycemia >> post-prandial, or somogyl reaction)

**PROBLEM LIST:****- Vomiting**

- suspect patient ingested undiluted H2O2 by licking himself and/or other puppies after it was used to clean them. Dose to induce vomiting in a dog this size would be less than a teaspoon. Signs should be transient and mild.

**Plan**

Discussed that this puppy should be fine.

Hopefully stools will become more solid now that they are being weaned onto solid food.

No treatments administered while here

Sent Jana with a box of 16mg Cerenia tablets: can give 1/2 tab (8mg) to any of the puppies if they are vomiting today. Keep on hand, just in case.

Dilute H2O2 in future if it will be used to clean the puppies

This document is an estimate of the medical care plan that will be carried out for and on my pet. My signature below signifies that I (initial here) understand and accept responsibility for the payment of these estimated fees as they are performed by this facility. I understand that a deposit of **100%** of this amount **will be required at the time my pet is admitted as a patient** or before such services are initiated. I understand that this is only an **estimate** of charges based on the doctor's treatment plan, and actual charges may be higher or lower than this amount. I understand that this facility will not exceed this amount by more than 15% without informing me. I accept that no guarantee of successful treatment has been made.

I acknowledge that changes in my pet's condition or discovery of other findings during treatment may necessitate a change in or an (initial here) extension of the original estimate and if this occurs, a staff member will attempt to contact me to update this figure. In the event I cannot be reached, Rockingham Emergency Veterinary Hospital has my permission to proceed with medical care for a) a life-threatening condition or b) additional services that will preserve or enhance my pet's health or c) minimize the need for and risks of additional and costly services at a later date. I agree to pay the balance of the above estimated fees at the time of my pet's discharge.

I agree that any amount unpaid after 30 days will be subject to interest at the rate of 18% per year (1.5% per month) until such (initial here) unpaid amount is paid in full. Additionally, I will be responsible for the reasonable cost of collection of any such unpaid amounts, including collection and attorney's fees.
